**ISSN (Print): 2950-3752**  
**ISSN (Online): 2950-3760**

## CURRENT ARTIFICIAL INTELLIGENCE

### Aims & Scope

Current Artificial Intelligence is an international journal promoting a comprehensive view of the field of artificial intelligence development to solve real-life problems. Artificial intelligence (AI) is a new technical science that studies and develops theories, methods, and application systems used to simulate and extend human intelligence. The research in this field includes computational intelligence, language recognition, image recognition, natural language processing, fuzzy systems, and expert systems. The rapidly published science journal focuses on the development of artificial intelligence methods in the world. Submitted papers should report some new aspects of the field of AI and also be validated using some public data sets for easy replicability of the research results.

The focal points of the journal include, but are not limited to these aspects:

- AI applications in medicine, law, and other disciplines
- Algorithms in artificial intelligence
- Artificial intelligence and philosophy
- Automated reasoning and inference
- Automatic control and robotics
- Bioinformatics
- Case-based reasoning
- Cognitive aspects of AI
- Common-sense reasoning
- Computing and the mind
- Constraint processing
- Heuristic search
- High-level computer vision
- Intelligent interfaces
- Intelligent robotics
- Machine learning
- Multiagent systems
- Natural computing
- Natural language processing
- Pervasive computing and ambient intelligence
- Planning and theories of action
- Reasoning under uncertainty or imprecision
